Description

Created [attachment 281](#) [\[details\]](#)

Changing the number of displayed results on the “Find Bugs” page causes the page to freeze instead of updating the results.

When attempting to change the number of results displayed on the “Find Bugs” page, the page becomes unresponsive. After clicking the buttons (e.g., 10, 25, 50 results), the interface freezes instead of updating the displayed number of results.

## Bug 1093

<b>Summary:</b>	When changing the currency on a product page in the “Find Bugs” section, the page freezes, causing the site to become unresponsive.

When changing the currency on a product page in the "Find Bugs" section, the page freezes, causing the site to become unresponsive.

A crash bug occurs when a user opens a product on the "Find Bugs" page and attempts to change the currency from the right-side menu. Instead of updating the product price to the selected currency, the page becomes unresponsive and freezes. This issue occurs consistently across all browsers, making it a high-severity crash bug.

## Bug 1094

<b>Summary:</b>	The Sign In button overlaps the footer on product pages with no color selection options, causing a visual layout issue.

Created [attachment 283](#) [\[details\]](#)

The Sign In button overlaps the footer on product pages with no color selection options, causing a visual layout issue.

A visual bug occurs on the product detail page when viewing items that do not have color selection options. After scrolling down the right-side menu, the Sign In button appears to overlap with the footer area instead of being positioned above it. This misalignment affects the page's visual layout and user interface consistency. The issue occurs in all browsers and is reproducible every time, but does not impact functionality, making it a low-severity visual defect.
